# SECTION 2 BAFFIN ARCTIC FOOD DEVELOPMENT STRATEGY

FEBRUARY 28, **1989** 

#### BAFFIN ARCTIC FOOD DEVELOPMENT STRATEGY

#### 1. BACKGROUND

11

In the past five years growing market demand end producer interest for an Arctic food industry, has necessitated that the Government respond by implementing along term development plan. Thisplan has been completed and includes the following: .

- Resource assessments were made on all species with commercial potential end quotes set for: caribou, muskox, norwhal, arctic char, shrimp and provisional quotes set for scallops and Greenland halibut.
- Freezer/processing facilities were constructed in each Baffin community (excluding Iqaluit) under Special ARDA funding in 1986, and are now owned by the community Hunter's & Trapper's Associations.
- Test fishing projects were undertaken in 1955, 1986, 1987 end 1988 in winter and summer char fisheries, winter halibut end a summer scallop fishery. Two processing facilities have received provisional DFO approval, and a scallop boat was funded for two Pongnirtung fishermen.
- The department of Economic Development and Tourism has undertaken preliminary test marketing and promotion including test brand packaging, posters advertisements end the production of a l o g o .
- Producer training programs hove been tested under funding from government to introduce the skills required to horvest, process, and. price Arctic food on a commercial basis.
- A market survey was conducted in loaluit in July 1987 among industry and institutional consumers that confirmed the growing demand and product standards of the Northern consumers.
- A study to assess community interest and prefeasibility of various seal products has been undertaken in four regions of the Nothwest Territories by the Inuit Tepirset of Canada. This along with

studies of seal oil utilization end seal meat recipe development have indicated that there is interest **ond** development potential utilizing the seal.

The complexity of developing this industry with respect to the numerous government agencies and interest groups that are associated with renewable resource harvesting necessitated the formation of an Baffin Arctic Foods Committee (formerly Inter-settlement Trade Committee) in 1986. This committee is Chaired by the Ass't. Regional Director end includes the Regional Sup't. of Renewable Resources, Regional Sup't. of Economic Development&Tourism, the Executive Director of the Baffin Regional Council (represents the interest of both the Baffin Regional Council and Baffin Regional Hunter's & Trapper's Committee) end the District Manager of Department of Fisheries and Dceans.Fundamentally the committee oversees strategic planning in the region's Arctic food industry, but as well oversees inter-departmental co-ordination, provides program direction and profiles the industry throughout the Region end Territories.

The committee has entered the third end finalphase of developing **a** Baffin Arctic Food industry, notably the planning and implementation of a business strategy.

The committee hired en Arctic Foods Development Officer whose primary responsibility was to develop a viable production strategy and implement this program over a period of two years. The market development for the Arctic food industry is a responsibility of the deportment of Economic Development and Tourism.

In order for the Arctic food industry to succeed, primary producers must be made aware of opportunities, and they must acquire the skills necessary to produce quality products for the market. Producers must learn about distribution networks, and businesses must be started in those communities where opportunities present greatest potential for viability.

The following business strategy developed by the Arctic Foods Development Officer examine such issues as security of supply, seasonality,value-added processing, pricing, incentive, positioning, distribution systems, business administration, and priorities for development within the region. The success of the Arctic food industry

throughout the Northwest Territories hinges on the producers providing equality, economical product. It is critical therefore that producers address the very competitive and stringent standards of this industry.

The Baffin Arctic Food Industry has the potential to develop and expand to utilize products to the maximum limit of the sustainable harvest. This is consistent with the Executive Council goals of community economic development, renewable resource development, end import replacement. There is some difficulty in estimating the . potential value of the industry due to the current high costs of harvesting and inefficiencies in processing. The export market is os get unproven for this seasonal and exotic industry. Seafood products face stiff competition from the government subsidized industry in Greenland. Long term growth can be expected in all products as the harvesting, processing and marketing efficiency are developed and refined to ensure a competitive marketing position.

AFDO is a specialist position specifically to co-ordinate the development of the Arctic foods industry through the design and delivery of programs to improve Arctic food production systems, quality control and distribution and the development of on Inter-community market system. Some of the programs undertaken include:

- Assisting in the establishment of new viable business for the production of Arctic food;
- Co-ordinating training programs in food preparation, including product storage, butchering techniques, packaging and presentation;
- Establishing food distribution networks;
- Encouraging sound business practices including, inventory control, accounts poyobles and receivables;
- Encouraging processing equipment control and management; "

The AFDO has promoted with producers concepts of consumer expectation" in terns of product quality, presentation and supply consistency 8s well 8s response time given the constraints of **seasonal** production. The AFDO has responded to Arctic Food Industry initiatives from all of the Boffin communities where they have reflected the priorities of the strategic plan.

**.** 1.

The Baffin Arctic Food Industry has make a thrust into the domestic market with the Department of Economic Development and Tourism continuing its research into external markets. A limited demand currently exists for some products such as smoked char, and the both internal and external markets will be accessed whenever possible. The industry recognizes the constaints on external market access such as federal inspection, licensing, price competitiveness, and limited supply.

A preliminary research paper was prepared in July of 1987 revealing that there is good market potential in Iqaluit for Arctic food products. " There are, however, problems with distribution and availability of processed product in the quantities required at the time required by various businesses.

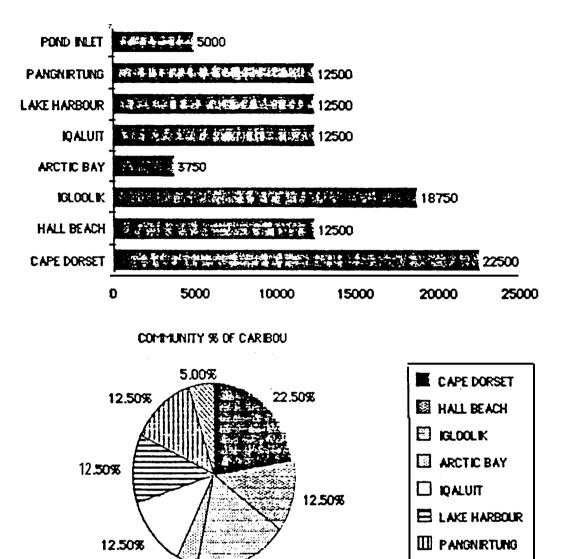

After the first year of the two year planned life of the AFDO position there has been progress in improving product quality, security of supply, competitive pricing, industry standard packaging, and increased produce awareness of market expectations. Above all, this project has recognized that the establishment of an economically viable centralized distribution centre is critical to the evolution of the industry in this region and to the development of further Arctic food business opportunities.

**POTENTIAL** COMMERCIAL VALUE OF SEALS

In the past two years there has been an aggressive effort in analyzing the potential economic benefits of utilizing the seal for commercial proposes. A study including field testing of rendered seal blubber asa heating fuel was undertaken by Arctic Co-operatives Ltd. at Pelly Bay.

After some modifications, they were successful in burning sealoiling conventional furnace. There is a considerable amount of research and equipment development required before this potential can be fully developed and applied on a broadbasis in the Baffin region, Seals skins playedamajor role in providing cash income to the hunter until the world market for seal skins was destroyed by 1982 though the efforts of Green Peace and other animal rights organizations. The Inuit Tapirsat of Canada is playing o co-ordinating role in attempting to undo the damage to the Inuit economy and to find alternate methods of commercially utilizing the seal. A strotegy for the Inuit sealing economy has been prepared in co-operation with regional organizations concerned with the the commercial utilization of renewoble resources. In the cose of Baffin region, their section of the strategy wos contracted to the Baffin Regional Hunters and Troppers Committee ond supervised by the arctic foods development officer. The recommendations contained in the 'Strategy For The Sealing Economy, Baffin Region Report" include:

-Wait for further research and development of seal oil before considering it os o viable heating fuel

-A pilot project in small scale, low technology tanning should be undertoken in BroughtonIsland with Minnguq sewing group acting as proponent. Funding proposal sarebeing preporedto undertake the seal skin tanning project at Broughton Island. -That further recipe refinement be undertaken on the best products developed and identified by Science Systems Research ond Development in their "Report on the Processing of Ringed SealMeat" end that o market test of these seal meat products be undertaken in Iqaluit.

A proposal has been submitted for the market test of seal meat products. Amarok Country Food Store Ltd. has been identified os the proponent for this project. The sucess of this market test could have a very positive effect on thevolue odded processing proposed for the distribution centre ond also odds a new product line for wholesale and retail sales. It is not possible to quantify the sales potential or. . associated costs of seal meat products at this time, therefore these products have not been included in on of the projects contained in this strategy. Considering the response received when Science Systems Research and Development presented their products for taste testing there is every reason to believe that there is market potential for value added seal meat products.

#### 3. SEASONALITY

The most frequent complaint heard from all consumers but most specifically from the restaurant trade is the leek of consistent supply of products.

A lack of working cepitelet the hervester 8nd processor levels make it difficult for them to do anything but sell their product es quickly 8s possible at the going price at th8t time. This price is often lower then it would be after the harvesting season. In order to address the problem of seasonality the issues of proper preparation for longer term storage with the processors 8nd the need for working cepitel to hold large inventories must be addressed.

Further training in better packaging, double glazing of fish, blast freezing 8nd vaccuum packing willoll help extend the shelf life of products. The need for working capital can be addressed from two One would be to arrange lines of creditor inventory prospective. loans and/or grants to those processors who may wish to hold inventory to extend the product availibility period. The weaknesses in this method 8re th8t this target group generally have a poor concept of business odministration and financial management and would probably use the inventory funds for capital purchases or improvements during the period when the funds were not needed for inventory. After one such cycle the working capital would no longer exsist. The second perspective would be the establishment of a central distribution facility with the capacity to prep8re products for long term storage when necessory and them8n8gement expertise to handle the working capital. This concept is discussed further later in this report.

There is also merit to researching methods of harvest in other seasons to extend to harvesting season for various products. The live trapping of Arctic Char during the summer would bean example of this concept. It could be assumed that this method could help alleviate the seasonality problem but it will not elliminate it.

#### 4. TRANSPORTATION COSTS

Transportation costs add significantly to the cost of Arctic foods when viewed from the intersettlement, interregionel or export perspectives. First Air heve m8de available e space available special commodity rate th8t has helped significantly. This was originally developed for the shipment of fish but has been expended by the eirline to include meat

and some other products. Copy of the First Air rates is included in the table below.

X

]

There is currently in force a subsidy for intersettlement shipment of fish celled "G.N.W.T. Commercial Fisheries Assistance Program For Intersettlement Trade In Fish". Assistance is equal to 50% of the transportation costs of the freight to the consuming community. When this subsidy is coupled with the First Air special rate, the cost of transporting fish drops dramatically. There would be considerable merit if the Government of the Northwest Territories would follow First Air's lead and consider extending this subsidy to include all Arctic food products.

#### 5.TRAINING REQUIREMENTS

#### BUSINESS ADMINISTRATION

One of the greatest problems feting the entrepreneur or smell business in the north is a lack of formal training and experience for the administration of their business. It has been a perennial issue with the hunter's end trapper's associations and other smell businesses involved in arctic food production and processing. Good secretary managers look at their job with the HTA as entry level end often take bookkeeping training while employed by the HTA. If they show a aptitude for this type of work they are offered abetter paid full time job with a store, the hamlet office or the government. The result is a regular turn over of office staffer the HTA eventually being stuck with a person unsuited for the job but who has no further possibility of advancement.

From the perspective of the individual moving through these steps toward permanent well paid employment there is nothing wrong with the process. From the perspective of smell business trying to suceed it is o very difficult situation. Without regular access to timely financial reports a small business cannot function efficiently, make reasonable financial decisions or know when corrective action is required.

Since this is a problem common to all communities and to many small businesses it is essential that a good regular training system be put into place that contrain regularly in the areas of bookkeeping and business administration. I would recommend that Arctic College take e more aggressive role and include the following in their efforts to combat this problem:

1. Develop a competency hosed set of training modules that cover all of the general areas of business administration and include specific modules on some of the more common business activities. Examples might be modules on the estimating and tendering processes for small construction companies. Modules on merchandising, inventory control etc. for smallretail businesses.

2. Hove 011 training materiels available in Inuktitut.

3. Utilize distance training methods that could include teleconferencing, lectures on video tape and computers

4. Ensure that adult education centres in all communities have instructors with appropriate kills, have the training materials and view this area as a training priority.

#### **MEAT AND FISH PROCESSING**

. .

Basic training programs in meat and fish processing have been delivered in various settlements in the region over the past four years. Although these courses have been adequate to make an enty into the meet and fish processing business there will be a need for more courses at both entry level and for more advanced types of training as the arctic food industry grows. In the past either the Arctic Food Development Officer or the Supervisor of Renewable Resource Development have developed the training outline and brought in a southern expert to act as the trainer. The imported experts have been effective in instructing their class. They are expensive and there have not been many structured training materials left behind for future training courses. Training would also be more effective if delivered in the first language (often the only language) of the trainees.

I would recommend that Arctic College become more involved in this type of technical training. The following steps would be useful in developing and improving this training:

1. Develop curricula for meat cutting, fish processing and various value
added processes related to arctic food products.

2. Have all training materials available in Inuktitut.

3. Utilize distance training methods that could include teleconferencing, lectures and demonstrations on video tape and computers

4. Ensure that Northern people with instructional skills and fluency in Inuktitut are trained as meat cutting and fish processing trainers.

5. Explore the possibility of establishing an apprenticeship program in meat cutting.

#### 6. MARKETING STRATEGY

#### LOCAL SALES

At the local level every community has on octive informal shoring of domestically hor vescenarization foods. This generally covers the seeds of the local lnuit population for these products during the season of harvest. Local sales of arctic foods therefore should focus on three oreos. The first area is holding inventory beyond the harvest season and selling it to the lnuit population. The second area is value added processing of arctic food products to enhance the variety or convenience to the consumer. This should beef interest to the entire local population. The third area is basic cutting and packaging to make the product available and more convenient to the non-lnuit population. They would find this attractive from the nutritional and economic perspectives. There is real value to local dining rooms and restaurants in promoting arctic foods to tourists.

In many communities the HTA have established a small stores with their association offices. This has been reasonably sucessful and has operated without government assistance beyond the Renewable Resources grants given to HTAs to operate their association. Part of this grant is often used to paystaff costs. Small amounts of arctic food are retailed in this way. Processors of arctic food should focus on expanding the local market through encouraging retail sales in the Northern Store Ltd. stores, co-operative stores and other retail stores.

#### ACTIONS TO EXPAND LOCAL MARKET

- 1. Development of new products
- 2. Fair wholesale prices to allow retailers a reasonable profit
- 3. Institutional price to restaurants etc.
- 4. Development of value added processing
- 5. Attractive packaging materials
- 6. Professional looking cuts and preparation
- 7. Radio talks on products available and ways to prepare
- 8. Promotion in regional news papers
- 9. Sales aids such as recipe cards, labels, in store taste tests
- 10. Better displays in retail stores

#### REGIONAL

At the regional level there is en active intersettlement trade in arctic foods. Settlements buy from each other those products that are not harvested locally. The bulk of arctic food products flow from the settlements to Iqaluit. There are several reasons for this. Amarok HTA Store has been the largest retailer of arctic foods for many years. There are now two other Iqaluit stores retailing arctic foods. There are four Iqaluit restaurants that offer arctic foods on their menus. Iqaluit has the largest population. Half of whom are non-inuit end not hunters. Many of the Inuit resident in Iqaluit are employed in the wage economy and don't have time to hunt. There are government institutions serving arctic foods.

#### ACTIONS TO EXPAND REGIONAL MARKETS

- 1. Development of new products •
- 2. Fair wholesale prices to allow retailers a reasonable profit
- 3. Institutional price to restaurants and government institutions.
- 4. Development of value added processing
- 5. Attractive packaging materials
- 6. Professional looking cuts and preparation
- 7. Radio talks on products available and ways to prepare
- B. Promotion in regional news papers
- 9. Sales aids such as recipe cards, labels, in store taste tests
- 10. Better displays in retail stores

#### INTERREGIONAL

The interregional market has primarily consisted of products shipped to Yellowknife from the Baffin Region. As the other regions continue to expand their ability to process arctic foods there will be a diminishing opportunity to sellbasic products interregionally with the exception of those products that are not harvested in the other regions. Baffin region scallops, turbot, and shrimp will continue to grow in demand in most other regions. Value added processing will continue to create interregional interest. Imagination and product quality will play a role in interregional sales of value added products.

#### ACTIONS TO EXPAND INTERREGIONAL MARKETS

1. Development of new products

- 2. Fair wholesale prices to allow retailers a reasonable profit
- 3. Development of volue added processing
- 4. Attractive packaging materials
- 5. Professional looking cuts end preparation
- 6. Promotion in news papers and magazines
- 7. Aggressive seles activity in largest potential markets
- 8. Telephone sales activity to secondary potential markets

**9**. Freight subsidy for shipment of arctic food meat products similiar to exsisting subsidy for fish products

#### EXPORT

The export market will be limited to fish products in the foreseeable future. With temporary certification of some freezer/processing plants available to process arctic char, turbot and scallops, there is an opportunity to export these products into the eastern Canadian market. There is an opportunity to export Arctic Char to Freshwater Fish Marketing Corporation when economical transportation links can be made. Smoked arctic char from IqaluitEnterprises Ltd. appears to be in very good demand as an export product. This could create a value added opportunity for two or three communities to ship filleted arctic char to IqaluitEnterprises Ltd. for further processing.

#### ACTIONS TO EXPAND INTERREGIONAL MARKETS

1. Training in fish processing and filleting techniques in three or four communities

- 2. Attractive packaging materials
- **3.** Development of value added products from smoked arctic Ch8r
- 4. Promotion in news papers and magazines
- 5. Aggressive sales activity in largest potential markets

#### 7. THE ROLE OF AMAROK COUNTRY FOOD STORE LTD.

Review of the concerns of local consumers of arctic foods indicate. 8 desire for these products to be available on astable year around basis at consistent prices. The Amorok Hunters and Trappers Association hove olwoys felt that they were not treated fairly when freezer/processing facilties were provided to all other communities in the region for both domestic and commercial use. Analysis of the viability of a distribution centre shows that the probability of financial sucess for this operation and for the other functions of Amorok HTA is increased by expanding into a multifunctional operation that provides meet processing, value added processing, wholesale distribution and retail sales. Various costs split among the functions are lower then they would be with each function operating as an autonomous business. A multifunctional operation would also require the resources to pay a competent and experienced manager that wages required to attract and keep him. This would solve Amoroks' problem of getting and keeping good management. The following narrative and spreadsheets analysis each function of the proposed operation.

#### **MEAT PROCESSING**

There is a commercial quota of 100 caribou available to looluit hunters. It is an expressed desire of Amorok Hunters And Trappers Association to once again own o processing/freezer facility. They feel that there is added economy and efficiency in having their own facility. Earlier attempts to make arrangements with other operators of meat cutting facilities have not been successful. They are currently having meet cut at Bye the Sea Restaurant but only consider this o temporary measure. The spread sheet analysis shows the revenue and expenditures related to this department

#### VALUE ADDED PROCESSING

As con been seen in the in the spreadsheet analysis there is value odded processing required for the products of local hunting as well os product that requires further value added processing from some of the other settlements.

#### PRICING

Analysis has been done of the cost impact of having a distribution centre handle arctic food and take a mark up of 25% on the processor price. Comparison has also been done between the Iqaluit price of beef compared to caribou handled through this system.

#### VOLUMES

Details of volumes are given in the assumptions relating to each table. Generally it is assumed that 811 caribou harvested locally would receive some processing and storage in this facility. The value added processing is hosed on the logicit quota cof caribou and further processing of meat ground in some other settlements. Since logicit has the only commercial size smoker it is expected that this facility could be rented to smoke various products. Half or less of most products are assumed to move through the distribution facility. The major market focus of the distribution centre would be the local dining room and institutional markets along with wholeside sales to local retailers. Marketing would also focus on other restuarants in the region and interregional wholesale sales.

The **retoilsales** volumes estimated for **Amorok** store are based on volumes achieved during the periods of best management of the store and the assumption that aggressive marketing and the **mony new** end different products will expand the 10CO1 and tourist market.

2 s

#### 8. CORPORATE STRUCTURE

This proposal assumes that Amarok Country Food Store Ltd. will enter<sup>GC</sup> into a joint venture with another company with the management expertise to develop and manage successfully the various departments outlined in this proposal. The equity position of Amarok in this joint venture would be 75% ownership Both partners would make contributions in proportion to their equity position.

Le .

mande March

If Amarok Country Foods Store Ltd. did not wish to proceed with this proposal then another proponent active in the Arctic food business would be sought to lounch the business.

#### 9. ROLE OF THE ARCTIC FOOD DEVELOPMENT OFFICER IN 1989/90

#### TRAINING

#### SEAL SKIN TANNING

A pilot project in smell stole, low technology tanning is proposed in Broughton Island with Minnguq sewing group acting as proponent. With the philosophy of total utilization of the seal, there is merit in the Arctic Food Development Officer playing a role in the pilot project to ensure success and that the preparation end handling of the meat is

considered in the tanning project.

#### SEAL MEAT PRODUCTS

A proposal has been submitted for the market test of seal meat products. Amarok Country Food Store Ltd. has been identified os the proponent for this project. The success of this market test could have a very positive effect on the value added processing proposed forthe distribution centre ond also odds a new product line for wholesale end retail sales. Planning and northern co-ordination of themorket test ore Arctic Food Development Officer activities.

Further development of these products into the **regular** harvesting, processing ond marketing systems of arctic foods would logically follow from a successful market test of seal products and would also foil within the manadate of the Arctic Food Development Officer.

#### BUSINESS ADMINISTRATION

The concern with proper business administration of harvesters, processes and distributors of arctic food products has been included in the job description of arctic food developemnt officer in the past. In this year the emphasis would be on creating a formalize training structure through Arctic College to address this issue in a way that

would make the training possible on **b** regular basis when required end would address the following issues:

1. Develop © competency based set of training modules that cover all of the general areas of business administration and include specific modules on some of the more common business activities. Examples might be modules on the estimating and tendering processes for small construction companies. Modules on merchandising, inventory control etc. for smallretail businesses.

2. Hove 011 training materials available in Inuktitut.

3. Utilize distance training methods that could include teleconferencing, lectures on video tope ond computers

4. Ensure that adult education centres in all communities have instructors with appropriate skills, have the training materials and view this area as a training priority.

#### MEAT AND FISH PROCESSING

Basic training programs in meet and fish processing have been delivered in various settlements in the region over the past four gears. Although these courses hove been adequate to make an entry into the meat and fish processing business there will be a need for more courses at both entryleveland for more advanced types of training as the arctic food industry grows. In the past either the Arctic Food Development Officer or the Supervisor of Renewable Resource Development hove developed the training outline and brought in a southern expert to oct os the trainer. The imported experts have been effective in instructing their class. They are expensive and there have not been many structured training materials left behind for future training courses. Training would also be more effective if delivered in the first language (often the only language) of the trainees. In this year the emphasis would be on creating a formalize training structure through Arctic College to address this issue in a way that would make the training possible on a regular basis when required and would address the following issues:

1. Develop curricula for meat cutting, fish processing and various value added processes related to arctic food products.

2. Have olltroining moteriols available in Inuktitut.

3. Utilize distance training methods that could include teleconferencing, lectures and demonstrations on video tape and computers

4. Ensure that Northern people with instructional skills and fluency in inuktitut are trained as meat cutting and fish processing trainers.

5. Explore the possibility of establishing en apprenticeship program in meet cutting.

#### VALUE ADDED PROCESSING

Work has been done in the past three years to start the development of volue added processing. This work has indicated that the skills to do value odded processing con redeveloped at the community level when the volumes are sufficient for financial viability. Morket acceptance of oll volue added products has been excellent. Now these skills have to be developed in more communities end those products that require greater investments in equipment have to be centralized with product flowing to the central location for final value added processing. New products are expanding the need for further development, market testing and associated training. The area of quick preparation products such as frozen foods and dinners has not yet been addressed in terms of the training requirements. There is a need for troining in oll producing communities in the oreo of processing to increase shelf life to begin the process of expanding the time products could be available. The arctic food development officer should be continue this work.

#### **NEW** PRODUCT **DEVELOPMENT**

#### TANNING

A pilot project in smell scale, low technology tanning should be undertaken in Broughton Island with Minnguq sewing group acting as proponent. Funding proposals are being prepared to . undertake the seal skin tanning project at Broughton Island. Baffin Regional hunters 8nd Trappers Committee and the Arctic Food Development. Officer have role to plan in this project because of its implications for hunters and for the use of the seal meat for commercial purposes.

#### SEAL MEAT PRODUCTS

۳,

.

A proposolhos been submitted for the market test of seal meet products. Amarok Country Food Store Ltd. has been identified as the proponent for this project. The success of this market test could have a very positive effect on the value added processing proposed forthe distribution centre end also adds o new product line for wholesale and retail soles. It is not possible to quantify the soles potential or associated costs of seal meat products at this time, therefore these products hove not been included in an of the projects contained in this strategy. Considering the response received when Science Systems Research end Development presented their products for taste testing there is every reason to believe that there is market potential for value odded seal meat products.

#### VALUE ADDED PROCESSES

Work has been done in the pest three years to start the development of value added processing. Market acceptance of all value added products has been excellent. Now these products have to be developed in more communities and those products that require greeter investments in equipment have to be centralized with product flowing to the central location for final value added processing. New products are expending the need for further development, market testing and associated training. The area of quick preparation products such as frozen foods and dinners has not yet been addressed. The arctic food development officer should be continue this work.

#### MARKET EXPANSION

As indicated early in this report there is further work to be done in the expansion of markets at the local, regional, interregional and export levels. This work should shored by the Deportment of Economic Development and Tourism and the arctic food development officer. The items listed below should be considered priorities in the expansion of markets;

- 1. Development of new products
- 2. Fair wholesale prices to ollow retailers o reasonable profit
- 3. Institutional price to restourants etc.
- 4. Development of volue added processing
- 5. Attractive packaging moterials
- 6. Professional looking cuts and preparation
- 7. Radio tolks on products available end woys to prepare

<sup>29</sup> 

- 8. Promotion in regional news papers
- 9. Soles aids such as recipe cords, labels, in store taste tests
- 10. Better displays in retail stores

#### DISTRIBUTION CENTRE

The following steps ore **necessary** for **the** implementation of the distribution centre concept within **a** one year period. The **arctic** food development officer **has a** lead role to play in this development

- 1. Complete proposal
- 2. Consultation with Amerok Hunters and Trappers Association Consultation with B.R.H.T.C., B.R.C. and B.R.I.A.
- 3. Review and support of **Baffin Arctic** Food Committee **Review** and support of regional deportments of Renewable Resources and Economic Development
- 4. Approval of funding agencies
- 5. Complete material lists
- 6. Ownership structuring Incorporation
- 7. Complete tendering process Place orders and arrange shipping
- 8. Incorporation complete
- 9. Company hires project manager
- 10.Existing buildings relocated Site work complete All construction materiels delivered to dock
- 1 I. Construction material delivered to site
- 12. Building erection

#### 13.Negotiatea management agreement

#### 14.Building completed

1 S. Equipment operational

16. Inventory inplace

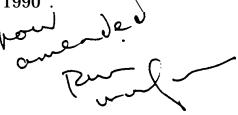

17.Grand opening

#### MANAGEMENT BY OBJECTIVES

With the many objectives set out above for this year in the areas of training, new product development, market expansion and a distribution centre there will be a need for priorities to reestablished. The Boffin Arctic Food Committee will set the priorities and assign the tasks within the framework of the management by objectives process. They will also monitor progress and evaluate the performance of the arctic food development officer.

#### BUDGET FOR 1989/90 FOR ARCTIC FOOD DEVELOPMENT OFFICER MARCH 1, 1989 TO FEBRUARY 28, 1990

| Wages & Allowance          | 55,845.00  |
|----------------------------|------------|
| Benefits                   | 6,701.00   |
| Telephone                  | 3,744.00   |
| Office Rental              | 3,744.00   |
| Computer Rental            | 2,486.00   |
| Supplies & software        | 1,040.00   |
| Interpreting & Translation | 1,040.00   |
| Typing Services            | 2,496.00   |
| Administration             | 6,240.00   |
| Travel Expenses            | 18,? 20.00 |
| Total Estimate             | 104,562.00 |

#### 10. EXPECTATIONS FROM GOVERNMENT

1.

A) Support for the second **year** of funding for the Arctic Food Development Officer.

B) Government support in the form of a grant end/or loan for the **construction of processing room/freezer storage/new retail** space. Construction costs **are** estimated et \$300,000.00.

C) Working capital of up to \$140,000.00 will be required to purchase sufficient product during the horvest seasons to ensure continuity of supply.

D) Expansion of the freight subsidy to include transportation of all Arctic food products will help make these products competitive with southern import products without dramatically reducing the benefits to harvesters end processors.

E) The status of D&M costs for all freezers in the N.W.T. is uncertain due to the continuing lack of a freezer policy by the Gov't of N.W.T.. The ability to estimate the viability of the distribution centre is hampered by the lock of this policy or knowing if this proposed facility will receive D&M funding.

F) The territorial government has indicated that it will be passing legislation creating meat inspection regulations. This move in setting industry standards is necessary and important for the protection of consumers.

SECTION 1 BAFFIN ARCTIC FOOD BUSINESS PLAN SUMMARY

FEBRUARY 28, 1989

## BACKGROUND

In the **past** five years growing market demand and producer interest for an Arctic food industry, has necessitated that the Government respond by implementing a long term development plan. This plan has been completed end includes the following:

- Resource assessments were mode on **a**]] species with commercial potential **and** quotas set.
- Freezer/processing facilities were constructed in each Baffin community (excluding Iqaluit).
- Test fishing projects were undertaken
- Preliminary test marketing and promotion
- Producer training programs have been tested to introduce the skills required toh8rvest, process, and price Arctic food on a commercial basis.
- A market survey was conducted in lqaluit in 1967 that confirmed the growing demand and product standards of the Northern consumers.
- Studies to assess community interest and prefeasibility of venous seal products have been undertaken.
- The formation of **a Baffin** Arctic Foods Committee
- Hired an Arctic Foods Development Officer whose primary responsibility was to develop a viable production strategy and implement this program over a period of two years. Some of the programs undertaken include:

-Assisting in the establishment of new viable businesses for the production of Arctic food;

-Co-ordinating training programs in food preparation,

including product storage, butchering techniques, packaging end presentation;

-Establishing food distribution networks

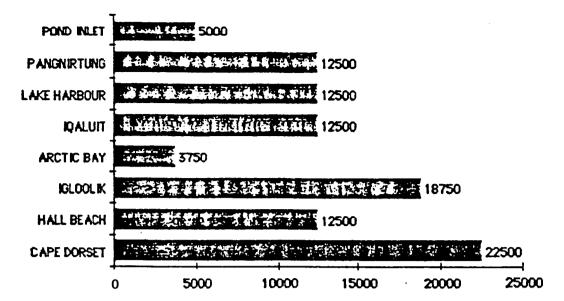

-Encouraging sound business practices including, inventory control, accounts payables end receivables;

-Encouraging processing equipment control and management; After the first year of the two gear planned life of the AFDO position there has been progress in improving product quality, **securityof**. " supply, competitive pricing, industry standard packaging, and increased producer awareness of market expectations. Above all, this

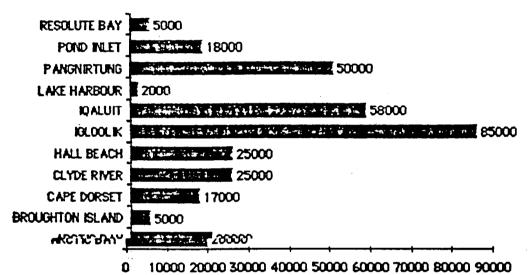

project has recognized that the establishment of an economically viable centralized distribution centre iscritical to the evolution of the industry in this region and to the development of further Arctic food business opportunities.

# HARVEST POTENTIAL OF SOME ARCTIC FOOD SPECIES

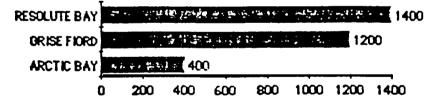

#### POUNDS OF CARIBOU

POUNDS OF ARCTIC CHAR

POUNDS OF MUSKOX

### SEASONALITY

The most frequent complaint heard from **o**]) consumers but most **specificolly** from the restaurant **trode** is the lock of consistent supply of products.

A lack of working capital of the harvester ond processor levels make it difficult for them to do anything but sell their product as quickly as possible of the going price at thot time. In order to oddress the problem of seasonality the issues of proper preparation for longer term storage ond the need for working capital to hold large inventories must be addressed.

Research is necessary into methods of horvest in other seasons to extend the harvesting season for various products. This method could help alleviate the seasonality problem but it will not elliminate it.

## TRANSPORTATION COSTS

Transportation costs odd significantly to the cost of Arctic food. There is currently in force o subsidy for intersettlement shipment of fish coiled "G.N.W.T. Commercial Fisheries Assistance Progrom For Intersettlement Trade In Fish-. Assistance is equal to 50% of the transportation costs of the freight to the consuming community. This program should be extended to include all Arctic food products.

## **BUSINESS ADMINISTRATION**

One of the greatest problems facing the entrepreneur or smell business in the north is a lock of formal training and experience in the administration of their business. Since this is a problem common to all communities and to many small businesses it is essential that Arctic College put into place a good training system be that include the following:

> 1. A competence hosed set of training modules that cover allof the general oreos of business administration end include specific modules on some of the more common business activities.

2. All training materials available in Inuktitut.

Utilize distance training methods that could include .
teleconferencing, lectures on video tope and computers
Ensure that adult education centres in all communities have instructors with appropriate skills, have the training materials end view this area as a training priority.

# **MEAT** AND FISH PROCESSING

Basic training programs in meet and fish processing hove been delivered in various settlements. There will be a need for more courses at both entry level and advanced training. Arctic College should take a lead role in this technical training. The following steps are necessary:

1. Develop Curricula for meet cutting, fish processing and vorious value odded processes related to arctic food products.

2. Have all training materials available in Inuktitut.

3. Utilize distance training methods that could include teleconferencing, lectures and demonstrations on video tape and computers

- 4. Ensure that Northern people with instructional skills and fluency
- in inuktitut are trained as meat cutting and fish processing trainers.
- 5. Explore the possibility of establishing an apprenticeship program
- in Arctic food processing.

# MARKETING STRATEGY

ACTIONS TO EXPAND LOCAL AND REGIONAL MARKETS

- 1. Development of new products
- 2. A distribution cnetre with fair wholesale prices
- 3. Institutional prices to restaurants and government institutions
- 4. Development of volue added processing
- 5. Attractive packaging materials
- 6. Professional looking cuts and preparation
- 7. Rodio talks on products available and preparation methods
- 8. Promotion in regional news papers
- 9. Soles 8ids such 8s recipe cords, labels, in store taste tests
- 10. Better displays in retail stores

# ACTIONS TO EXPAND INTERREGIONAL MARKETS

All of the activities to expand the local end regional markets as well as:

- 1. Promotion in territorial news papers and mogazines
- 2. Aggressive sales activity in lorgest potential markets
- 3 Telephone sales activity to secondary potential markets

4. Freight subsidy for shipment of **arctic** food meet products **similiar** to **exsisting** subsidy for fish products.

## ACTIONS TO EXPAND EXPORT MARKETS

All of the activities to expand the other markets os well as:

- 1. Development of volue odded products from smoked arctic chor
- 2. Promotion in national news papers and magazines
- 3. Aggressive sales activity in largest potential markets

## JOB DESCRIPTION FOR ARCTIC FOOD DEVELOPMENT OFFICER

م هه / هر س

. . `

- 1.0 INCREASE COMMERCIAL AVAILABILITY AND QUALITY OF ARCTIC FOODS IN THE BAFFIN REGION.
